

Please draw/sketch the toolstring configuration for:

- 1) Drift run/tubing clearance check
- 2) Sinker bar run
- 3) Set and retrieve plug
- 4) Set and retrieve insert valve

Primary Wireline Tool-string

Tool-string configuration according to requirement. Introduction to

a) rope sockets

To provide link with the wire and toolstring

b) stem lead

To add weight toolstring for overcome well pressure and function to provide impact downhole

c) tungsten stem

To provide greater weight for the same diameter and length the inside is filled with lead to provide maximum density.

d) roller stem

Additional for toolstring for denatured well to reduce the functional losses against tubing wall

James A. Smith

03/10/24

e) jars

It is essential that the operator can recognise the precise opening and closing of the jar on weight indicator.

f) knuckle joints,

is permitted of movement and should be used only when necessary and high deflection angle of well

g) swivel joints,

to prevent twisting of the wire in the following toolstring.

h) quick-lock coupling

- A faster method connection toolstring component.
- Save time when make up toolstring.

James [Signature] 03/10/21

i) gauge cutter,

- Tubing clearance
- check tubing id

j) Blind Box

When heavy down hole jamming is required to disintegrate a fish or pull something in down hole.

k) lead impression box

To obtain a picture of downhole block in well

l) swage

Used to restore light corrosion in tubing string.

m) wire scratcher

- To clean ID tubing nipple and profile.

James [Signature] 03/10/24

n) tubing end locator

- locate the end of production tubing.
- Allowing the total depth to be measured.

o) wire recover tool

- To located and pull up the damaged end of wire.

Fill up below Table

A. Size of Wire that use at DB 1. 0.108" 2iron/2NPA 2. 0.125" 2iron/2NPA 3. 0.140" 2iron	B. Breaking point of each wire 1. 2500 LBS 2. 3300 LBS 3. 4050 LBS
C. Type of wire used at DB 1. EIPS 2. 2IRON/2NPA 3. BRAIDED WIRE	D. How to test if wire is good or not 1. TWIST TEST 2. STRENGTH TEST 3. WRAP TEST
E. Why do we need to check on the tools before running in hole (RIH)? - To ensure tools in good condition and function. - To prevent from tool break-off inside the well James <i>[Signature]</i> 01/05/2021	

F. What do we need to do if the tool is damage or lost in hole?

- Report to supervisor on board.
- Get advice from town.
- Give problem report to town

G. What do we need to do if equipment failed to work?

- Try to troubleshoot problem
- Get advice from town
- Give problem report to town.
